Human computer interaction salary reddit

Hi everyone!I'm a university undergrad currently wrapping up my undergrad in Anthropology. I'm very interested in the general field of User Experience (UX), especially User Experience Research (UX Research).I have come to understand that there's a need for people in the social sciences (e.g., psychology, sociology and anthropology) to bring our knowledge and experience into the field.My university also offers a Master's program in Human Computer Interaction (HCI). I'm very interested in taking this program but I'm not sure if it would be a worthwhile investment. I've seen far too many graduates (Master's and PhD) who can't find a job and struggle to make ends meet.On the other hand, most UX job ads that I've seen online require a minimum of a Master's in Psychology, Sociology, Anthropology or HCI and 3 to 5 years of experience.I feel that I could manage a Master's in Anthropology however the job market for HCI seems a lot better and let's face it: the future is in tech!I understand that common wisdom suggests hitting the job market after finishing your undergrad, but I did things a little backwards: I hit the job market after high school and then did my undergrad. For this reason, I feel that I could do a Master's right after my undergrad, however I'm very concerned that a Master's in HCI might not be worth the investment.I was wondering if anyone might have some advice to offer? I'm a UX professional in the southeast, and I make about $100k. My title is most frequently "Sr. User Experience Designer" (with the occasional "Human Factors Engineer" or "Information Architect II" thrown in for spice). Anyway, I want to transfer out to San Francisco with my company, but when I checked what UX designers make out west, the salaries seem comparable to what I'm getting here... maybe about $20,000 more, while the average rent on an apartment was at least double, if not triple what I'm paying now ($1,000 p/mo for a downtown studio apartment). So, realistically, what can I expect to earn as a UX designer in SF, and how much does it actually cost to live there? (specifically Redwood City)Thanks!Page 2 31 comments Hey folks, wondering if any of you out there have completed grad school in human computer interaction. What sort of career are you looking for? How was the degree?I've got a BSc. in computer science with some dev work experience and this would be an MSc. It turns out I don't like bashing my head against the keyboard trying to solve other peoples' engineering problems. I'm creative, so I was thinking that I could merge my interest in computer science with some creativity to get a half decent career.Anyway, just reaching out into the void and looking for some feedback. Hello, I am applying to programs this fall but have been really weighing the pros and cons of a PhD. The ultimate goal was to be a professor at a community college or research institution. But after scouring this r/ It seems like you have little control over finding an academic job and where it’s located. And I am trying to create roots where I am currently locatedI also have been thinking about the pay. I know I can do some summer internship but it seems $30k a year is standard. Are there any other ways to make at least $40k? Could I sneak a job on the side?Another thing I’m grappling with is going into industry. What is it like going into industry without any work experience? Do internships count as work experience? Should I just go into industry now and return to a phd later? Hey there...I am a currently a college student. I just finished my freshman year and am majoring in Human Centered Computing (here is a description)...This concentration is designed to meet the demand for experts in human-computer interaction and interface design, and provide an academic program for students interested in the interdisciplinary study of computer science, artificial intelligence, and cognitive psychology as they apply to human-computer interaction.I'm doing quite well in the major despite having no prior programming experience. I am definitely interested in CS and enjoy the work. However, I have a few questions for anyone in CS (and more specifically anyone in HCI)...I am very math inclined. It has always been my strong suit, however... I love people. Everyone I meet thinks that I am a business major. I'm very outgoing and have always been the 'popular kid' so to speak. It seems like many people in the CS major at my school are there because they want to sit in front of a screen all day - but that sounds like a nightmare to me. I really don't feel like I fit into the CS community, and always feel out of place (This is not at all an insult to the CS community. I have met some amazing people in my major. I just find that my interests lie elsewhere). This is the reason I went with Human Centered Computing rather than traditional CS. I'm very good at math and enjoy the analytic thinking and problem solving, but my passions have always been more towards art and psychology and working with people. I find myself in this sort of paradox of wanting to do computer science and yet not wanting to deal with computers all day.So, to anyone in HCI... what do your days look like? What are your interests? How often are you working with people vs being in front of a screen? Basically any reply would help. I just want to know if I will find my weird niche within CS, or if I will continue to feel out of place even in the career world.Any responses from anyone are highly welcomed and very appreciated. Thank you!
